Layer 3: Questions Only We Answer

Five Framing Options for Cross-Domain Intelligence

These cross-domain questions are impossible for any single vendor to answer.
They represent our unique value proposition to the economic buyer.

Grounded in Data

Every question and domain below is validated against survey responses from 10+ private clubs, the Unified Experience Layer platform strategy, and the High Pain / Low Buy pivot analysis.

February 2026 • Confidential

Version 1: The Operator's Lens

Framed around the daily reality of running a club — what keeps GMs up at night

Why This Framing

This framing mirrors the language operators actually used in surveys. 7/10 clubs said service consistency is their #1 outcome for 2026, and the “real-time cockpit” concept won 5-to-1 over revenue capture. This version leads with operational control because that’s what the data says they’ll buy.

⚙️ Service Consistency & Quality Control

- Which shifts and time blocks are producing the most service breakdowns — and why?
- When the same member gets a different experience on Tuesday vs. Saturday, what’s driving that variance?
- Which staffing patterns produce the best member satisfaction — and can we replicate them?

Survey Signal: 7/10 clubs selected “service consistency across shifts” as a top-3 outcome for 2026

"I can feel when we’re off, but I can’t prove it until it’s too late."

📡 Real-Time Operational Intelligence

- Right now, where on property are we about to fail a member — before the complaint arrives?
- When pace slows on holes 7-9 and the kitchen is backing up, should we delay seating the next wave?
- Across golf, dining, and events today, where do we need to shift resources in the next 30 minutes?

Survey Signal: 6/16 clubs chose “real-time cockpit” as the #1 unified platform outcome

"I manage by anecdote. By the time I see the data, the damage is done."

🔍 Member Visibility & Early Warning

- Which members are quietly disengaging across golf, dining, and events simultaneously?
- For members in their first 90 days, which behaviors predict 3-year retention vs. 1-year churn?
- Who is one bad experience away from resignation — and what was their last touchpoint?

Survey Signal: 90% of clubs value a daily Member Health Score; 43.5 avg budget points to member visibility

"I can see rounds, but I can’t see that John Smith is quietly disengaging everywhere."

Version 2: The Economic Buyer's Lens

Framed around the P&L impact and board-level accountability that justifies the purchase

Why This Framing

This framing targets the person who signs the check. 7/16 clubs said financial performance is the most likely board-level problem in the next 12 months. Clubs won't buy "systems integration" — they'll buy proof. This version connects every domain to measurable financial outcomes, following the "See It / Fix It / Prove It" framework from the survey analysis.

Dues Revenue Protection

- Which members represent $50K+ in annual dues and are showing early disengagement signals?
- What is the "first domino" behavior that predicts churn 6 months before resignation?
- Of members who resigned last year, how many showed cross-domain warning signs we missed?

Survey Signal: 8/16 clubs selected "member risk visibility / churn prevention" as a top-3 outcome

"A single resignation costs us $15K–50K in dues. We find out after the letter arrives."

Revenue Moment Capture

- How much post-round dining revenue are we losing because we don't connect the tee sheet to the host stand?
- Which member segments have untapped spend potential based on comparable member behavior?
- When on-course service response time exceeds 5 minutes, what's the downstream revenue impact?

Survey Signal: 8/10 clubs run F&B at negative/subsidized margins — the opportunity is reframing spend, not cutting cost

"I know my F&B numbers, but I can't connect a bad hole-9 experience to a lost dinner cover."

Board-Ready Proof & Accountability

- Can I show the board a real-time scorecard across member health, service quality, and revenue per member?
- When we invest in a new event format or staffing model, can we measure the retention and revenue impact?
- Which operational improvements generated the most measurable lift in the last 90 days?

Survey Signal: 7/16 clubs cited financial performance as the most likely board-level problem in 2026

"The board wants data. I bring anecdotes. That gap is getting dangerous."

Version 3: The Connected Journey Lens

Framed around the member's end-to-end experience across every touchpoint

Why This Framing

This framing follows the member, not the org chart. It maps directly to the platform architecture — the "tee sheet to on-course to post-round arc" described in the implementation roadmap. When 8/10 clubs are only partially connected, the cross-domain journey is exactly what breaks. This version makes the fragmentation visible and the platform value intuitive.

The Visit Arc: Arrival to Departure

- When a member books a tee time, plays 18, and skips the dining room — why? Was it pace, service, or preference?
- Which tee time blocks produce the highest post-round F&B spend, and what makes them different?
- Does turn-stand wait time on hole 9 predict whether a group stays for dinner?

Survey Signal: 13/16 clubs have only partially connected systems; the visit arc is where fragmentation is most visible

"The tee sheet, the kitchen, and the host stand operate like three different businesses."

The Engagement Arc: Season to Season

- Members who attend 3+ events per year — what does their retention look like vs. golf-only members?
- In a new member's first 90 days, which combination of touchpoints predicts long-term engagement?
- When a member stops responding to communications and reduces visits, is the pattern already terminal?

Survey Signal: 6/10 clubs rely on lagging indicators to judge member health; early engagement patterns are invisible

"I know event attendance, but I can't prove events are my best retention tool."

The Recovery Arc: Failure to Loyalty

- When a service failure occurs, can we trace back to what actually happened — not just what was reported?
- After a complaint is resolved well, does the member's subsequent behavior show recovery or continued decline?

- Which service failures have the highest downstream impact on spend, visits, and retention?

Survey Signal: 7/16 clubs learn about issues only after a member complains; tracing root cause across systems is impossible today

"I collect feedback, but I can't connect a complaint to what happened, if we fixed it, or if the member recovered."

Version 4: The Labor & Service Lens

Framed around the #1 daily pain point — staffing, service delivery, and the labor-experience connection

Why This Framing

Labor emerged as the most visceral daily pain in the survey. 7/10 clubs experience weekly-to-monthly staffing mismatches, and "service consistency across shifts" was the runaway #1 critical outcome. But clubs don't want payroll reduction — they want service assurance. This version positions labor intelligence as the gateway to the full platform.

Demand-Driven Staffing Intelligence

- Based on tomorrow's tee sheet, event calendar, and weather, exactly how should we staff each outlet?
- Which days this month are we most likely to be understaffed — and what's the revenue risk if we are?
- What does optimal staffing look like for a 220-round Saturday vs. a 80-round Tuesday?

Survey Signal: 7/10 clubs experience weekly-to-monthly staffing mismatches; 6/10 selected "better staffing to match demand"

"We guess. We over-staff some days and get crushed on others. There's no system connecting demand to staff."

Service Delivery & Consistency Assurance

- Which staff combinations produce the best member satisfaction scores — and can we schedule accordingly?
- When service quality drops on a specific shift, is it a people problem, a demand problem, or a systems problem?
- Are we delivering the same experience at 7am as we are at 2pm? On Monday as on Saturday?

Survey Signal: 11/16 clubs selected "service consistency across shifts/seasons" as a top-3 outcome — the highest of any option

"It's not a cost problem — it's the root cause of the service inconsistency they care about most."

The Labor-Experience-Revenue Connection

- When we're understaffed by 2 servers on a Saturday, what's the measured impact on F&B revenue that day?

- Does beverage cart coverage correlate with overall visit spend — and what's the revenue cost of gaps?
- Which operational improvements (staffing changes, process fixes) produced the most measurable lift in member satisfaction?

Survey Signal: 5/16 clubs said labor chaos = "managers firefighting vs. leading"; the cost is invisible because it hits experience, not payroll

"Managers firefight all day. By the time they look up, the member already had a bad experience."

Version 5: The Wedge Product Lens

Framed around what we build first — the Member Health Score as the entry point to everything else

Why This Framing

This is the most product-centric framing. Only 1/10 clubs is ready to switch systems, so the strategy must be a wedge that layers onto existing stacks. The Member Health Score had near-universal appeal (90% value it), member visibility got 43.5 of 100 budget points, and two clubs allocated 100% of their points there. This version frames Layer 3 as concentric rings around the Health Score wedge.

👁️ See It: The Member Health Score

- Across golf activity, dining frequency, event participation, and communication engagement — what is each member's health score today?
- Which members moved from "healthy" to "at-risk" this week, and what triggered the change?
- For members who resigned in the last 12 months, at what point did their health score first decline?

Survey Signal: 9/10 clubs find a daily health score valuable or extremely valuable; 2 clubs gave 100% of budget points to visibility

"I have a CRM, but it's a database, not an early warning system. It tells me who members are, not how they're feeling."

🎯 Fix It: The Real-Time Cockpit

- Right now, which service touchpoints on property are at SLA risk — and what's the intervention?
- When demand spikes in one area and dips in another, where should we redeploy resources?
- Which operational pattern today is going to generate a complaint I'll hear about tomorrow?

Survey Signal: 6/16 clubs chose "real-time cockpit" as the top unified platform outcome; "operational control" resonated 5:1 over revenue

"I need to see what's happening now and intervene before it becomes a member complaint."

📈 Prove It: Measurable Impact & ROI

- Since deploying the platform, how has member retention changed — and what's the dollar value of churn prevented?
- Which interventions (staffing changes, service recovery actions, event investments) produced measurable lift?

- Can I show the board a before/after comparison on service consistency, revenue per member, and member health trends?

Survey Signal: 7/16 clubs named financial performance as the top board-level risk; efficiency gains close the deal after the emotional sale is won

"The board asks for proof. Everything else is a story — and stories don't survive budget season."

Side-by-Side Comparison

How each version emphasizes different aspects of the same platform capabilities

Version	Domain 1	Domain 2	Domain 3	Best For
V1: Operator's Lens	Service Consistency	Real-Time Ops Intelligence	Member Visibility	GM / Ops Director conversations
V2: Economic Buyer	Dues Revenue Protection	Revenue Moment Capture	Board-Ready Proof	Board presentations, investor decks
V3: Connected Journey	Visit Arc	Engagement Arc	Recovery Arc	Product roadmap, platform architecture
V4: Labor & Service	Demand-Driven Staffing	Service Delivery Assurance	Labor-Experience-Revenue Link	Wedge sale, daily pain entry point
V5: Wedge Product	See It (Health Score)	Fix It (Cockpit)	Prove It (ROI)	End-to-end narrative, all audiences

Key Survey Signals Underpinning All Versions

43.5 pts — Average budget allocation to Member Experience Visibility (out of 100)
11/16 — Clubs selecting "service consistency" as a top-3 outcome for 2026
8/10 — Clubs running F&B at negative or subsidized margins
6/16 — Clubs choosing "real-time cockpit" as the #1 unified platform outcome
90% — Of clubs that value a daily Member Health Score
1/10 — Clubs ready to switch systems — the wedge must layer on, not rip-and-replace
